

Learn about the different woods, grain patterns and colour, and where to source your wood. There are many factors to consider when deciding what type of wood to use for a project. One of the most is the workability of the wood, the quality of the grain, the durability of the wood and whether it is suitable for your project.

Working with wood can be relaxing, and we have 3 experienced craftsmen who can give you instruction to help you complete your project. We have up-to-date mechanical tools as well as hand tools. We also give guidance on how to work safely with power tools, woodworking tools and hand tools to avoid injury.

Don't know what you might need to set up your own workshop at home. Some people don't know how to get started, or what woodworking tools they might need. We can help you with that as well and give you advice on what basic woodworking tools will get you started.

Rather than go out and buy something that may not be useful, come and find out what you need from our experienced craftsmen.

If you have no space at home for a workshop, or you live in a unit, by coming to our classes, you can still have fun working with wood.

You may have some experience with woodworking, come and share your experience with others.
